Sufficient supplies for June and July could be obtained by drawing wire of larger dimensions, but the supplying firms had stated that it was unlikely that further supplies would be made available, and a serious cut in production was expected if the Ministry could not obtain further supplies.

- f. Nickel wire: Stocks were sufficient for June to August. Some of it would however, have to be drawn to a finer diameter.
- g. F-wire: (2) Stocks and supplies would barely cover the June requirements. However, as of July the factory would have to produce a sufficient quantity itself to cover its requirements and those of the other lamp and tube factories in the Russian Zone. June production would be about 70 kg. The total requirements of the Russian Zone would be about 250 kg per month.
- h. Hydrogen: Stocks for 13 days were on hand. Oxygen stocks were sufficient for 3 days and cruis nitrogen for 12 days. Further regular supplies were expected. Stocks of pure argon were sufficient for June; 500 kg were expected to arrive in June. The remaining 100 kg required for that month wave to be manufactured by the factory itself.
- 1. Neon-helium: Monthly requirement, 100 liters. Stocks on hand were 70 liters, 200 liters were on order and were expected to arrive soon.
- j. Purest neon: Monthly requirement 15 liters. Stocks on hand were 25 liters. Delivery of 150 liters on order was promised for June.

50X1-HUM

## 3. VEB Fernmeldewerk Leipzig (VVB RFT)

Because certain raw materials were known to be in short supply, the factory management amended the planned target (Plansoll) for the factory by substituting planned production with less complicated apparatus and issued at each monthly production conference a delivery target (Liefersoll) for the month. Production within the framework of the target plan was as follows during the first half of 1951:

Branch exchanges (Nebenstellenanlagen)	118%
Tro apparatus Types 1 & 2 Medium circular relays	66%
Relay rails (Relaissabionen)	102% 64%
Overall figure (Glow protection devices?)	100%
(137% in 1st and 61% in 2nd Quarter)	88%

4. Production in the second quarter amounted to about 1,900,000 DM altogether. This low figure meant that production must be much increased during the second half-year. Planned figures for each month were as follows (those for the last of necessity be low):

July	1,600,000 DM	October	1,400,000 DM
August	2,000,000	November	1,400,000
September	1,800,000	Ducember	1,000,000
		peceumet.	T*000*000

5. Detailed production statistics for June and the second quarter 1951 were as

Type of in	strument	Target for 2nd Quarter 51	Target for June	Actual pro- duction for	for 2nd
Carrier fr telecommun	equency ications			June	Quarter 51

32 sets were completed in June. The planned target was 100 and the delivery target, allowing for the shortages of 0-cores, was 25. The delivery target for July was 100 sets. The delivery plan for the second quarter was unended

Fair enquiry concerning the delivery of 160 sets had been received by DARA, but has not yet been passed on to the factory.

## 9. Branch telephone exchanges

7.

Switchboard (Gluehlampenschraenke (wall board)). The June target of 50 sets could not be attained, because of a shortage of flat relays (from EAW Treptow) (3) and binding strips (Rueckloetsicherungsstreifen) (from Arnstadt) (4). The July target was set at 51 sets. The June target of 65 upright switchboards could not be attained, because of a shortage of plugs, binding strips, and toggle switches (Klinkenstreifen) (from Blankenburg) (5). Only 45 of the latter sets could be completed. Production statistics at the end of June were as follows:

- 10. Cabinets for Wismut AG: The four cabinets made for Wismut AG were refused by the customer. Another 8 cabinets were ordered, so that 12 modified cabinets would have to be delivered. An order for some cabinets was expected from a Soviet military unit.
- 11. Components for telecommunications equipment

"Mittleres Rundrelais (sic) according to drawing 4722t The June target of 23,565 was not attained; only 11,700 were completed during the month. The accumulating backlog required the completion of 42,000 by the end of July, and of 60,000 altogether by the end of August. Expansion of capacity was impossible because of the shortage of skilled labor and the increased output would have to be attained by improvements in organization. The delivery target for July was set at 19,230.

12. Special accessories for electrical communications equipment and measuring instruments

Relay rails for the ME.S.: The June target of 170 sets could not be attained, because Bautzen (6) complained about the switch plates and therefore 200 rails were required to be modified.

The July target was set at 160 sets 4 50 repairs 4 80 of "Stage Il". Production 50X1-HUM statistics at the end of June were as follows?

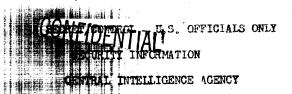

13.	Quantity	Planned Subassembly to Number	Actual	Planned Assembly to Number	Assembly to Test Shop Month Total	Testshop to Sales Month Total
	1360 300	1360 300	95 <b>100</b>	1360 80	105 1295	80 1199 50X1-HUM

- a. Post office repair program: The June target of 500 was not attained. The July target was also set at 500.
- b. Small testing boxes: It was proposed that production begin in August, although final specifications had not yet been received. Eighty had been crdered, some of 24 volt and the remaining of 60 volt. It was hoped to manufacture 20 in August.
- c. Abteilung (section) Plagwitz (formerly Stoecker & Co.) The following production has been planned for the third quarter:

15,000 box alarm (Dosenwecker) 15,000 microphone cases 1,500 door openers,

50X1-HUM

CONFERENCE TRAIT U.S. OFFICIALS CHLY

d. Special orders: Because of the large export demand for measuring instruments, it was decided that the factory should manufacture 150 RLC measuring bridges. for which the factory should manufacture 150 RLC measuring bridges. for which the factory should manufacture 150 RLC measuring bridges. for which the factories have details. However, the Ministry had been asked to rescind this decision and to allocate the whole production of 300 bridges to Erfurt (5), since that would be more economical than divising the factories.

50X1-HUM

14. VEB Geraeteverk Chemnitz

The June production plan was exceeded to 113.5%. The production planned for July was as rollows:

Sylicabourd instruments. (Personnel difficulties had arisen. 50X1-HUM Also difficulties in completing the Hungarian order for 40 Ø instruments).

600 ""Multizet" (sic) old. (Mirrors were lacking, and there were personner difficulties in the assembly department )

"Multizet" (sic) new (Housings were lacking)

Table instruments Kl.0.5 .

35 K1.1.

80 Portable wattneters. (The modified system holder were expected to be ready in the near future, and a test series of 100 would be made by 1 August.)

Circular wattmeters.

10-0hm instruments. 30

200 Small onmmeters.

70 Optical galvanometers.

10 Optical instruments.

30 Precision Wheatstone bridges. (Chemnitz was to take over gradually the production from Scheibenberg, (5) which would be fully occupied with "Thermofedersaetze" (sic).

15 Circular chammeters.

Table ohumeters.

15 Precision wattreters. (Prototype ready. Difficulties in assembly.

A decision about the practicability of these instruments was to be made as soon as possible.)

Buzzers.

400 Vibrator power units for Arnstadt. (722 and 600 had been returned and the laboratory was to see what could be done with them as soon es nosaible.)

Vibrator power units for stern-Radio.

50 Earphones for Wheatstone bridges.

400 Double earphones, Wismut model.

2000 "Thermofedersaetze" (sic) in Chemnitz.
3000 "Thermofedersaetze" (sic) in Scheibenberg. (5)

500 Polarized relays. (The factory had sent 10 kg of Mu-metal to Bautzen, for the manufacture of 200 cores).

4000 Motorcar regulators. (1500 induction coils not available).

1400 Motorcycle regulators. (About 50,000 DM less than in previous month).

1500 Tachometers (Zeehlwerke). (Number drums not available. Rheinmetall wanted an increase in production of 40% next year, and the factory agreed to that.

300 Single-pole switches. (Drawings were not ready, but the planned figure could probably be met).

300 Double-pole switches.

Teleprinters. (Tools for upper and lower carriages, as well as the type-raising device (Typenhebelkorb) were reported ready, and individual parts were in the subassembly. The works director asked everyone to make a special effort to prove that the factory could fulfil its contract on time, in spite of the difficulties which Werk HF (5) had
